Eclipse 101 from NASA

The last time most Americans experienced a total solar eclipse was 1991. On August 21, 2017, people will be able to observe the total solar eclipse, in partial or total form. This is a golden opportunity to observe one of nature's most exciting splendors and to engage and educate diverse audiences in the U.S. using a backdrop of this amazing celestial event coupled with NASA unique assets. This website has many suggestions for safe eclipse viewing, history, maps, glossary and general information on eclipses. [Check our webpage for link.](#)

Your Eclipse: How Can You Be Ready for the Big Day?

Why you need Solar Eclipse Safety Glasses

The only safe way to look directly at the uneclipsed or partially eclipsed sun is through special-purpose solar filters, such as "eclipse glasses" or hand-held solar viewers. Homemade filters or ordinary sunglasses, even very dark ones, are not safe for looking at the sun. [Check our webpage for link!](#)
